## Introduction

Our unwavering commitment to quality is a top priority as a leading provider of analytical reagents and high-quality Certified Reference material grade standards. We have established a comprehensive Quality Assurance System that adheres to ISO 9001 standards, ensuring the highest level of quality across all our products. With a strong focus on precision, every product we offer is manufactured to exact specifications with guaranteed consistency in quality and reliability. Our *TraceCERT®* and *Certipur®* line of ICP and AAS single- and multi-element certified reference material standard solutions are derived from exceptionally pure starting materials produced in accordance with ISO 17034 guidelines and characterized following ISO/IEC 17025 standards.

To demonstrate our dedication to quality, we employ a wide range of advanced analytical methods such as ICP-OES, ICP-MS, flame AAS, and graphite furnace AAS. These cutting-edge techniques allow for customized control and analysis processes, guaranteeing that our products consistently surpass the highest standards for accuracy and quality.

For accurate measurements, the quality of the reference standard used for calibration is paramount. That's why we stress the importance of starting each analysis with a fresh vial of certified reference or calibration standards of exceptional quality.

## Our Quality Grades

### ***TraceCERT®* and *Certipur®* Traceable Certified Reference Materials (CRMs)**

#### **What makes *TraceCERT®* and *Certipur®* stand above others?**

**Elemental and ion standards are available from various suppliers.  
Why should I buy *TraceCERT®* or *Certipur®* certified standards?**

Indeed, many different standards are available covering a wide range of quality, service, and price. As the world's number one supplier of research chemicals and standards, we introduced *TraceCERT®* and *Certipur®* reference materials to underpin our **leading position** in terms of **quality** and customer convenience.

#### **What makes *TraceCERT®* and *Certipur®* standards higher in quality?**

These CRMs are produced and certified in accordance with metrological guidelines: **highest accuracy**, low uncertainties, and in-depth documentation make *TraceCERT®* and *Certipur®* products completely reliable. These solutions are traceable to at least two independent references; NIST traceability is mostly made possible. In addition, we have extensive packaging knowledge, and we guarantee all certified values until the bottle is in the customer's hands.

#### **What is the value of our double accreditation to the customer?**

**Reliability!** Every analytical laboratory will demonstrate the correctness of its measurement results. The use of accurate and well-documented standards is, therefore, the first step to achieving correct measurement results. Our double accreditation, according to ISO/IEC 17025 and ISO 17034, is an explicit affirmation of our competence to produce, certify and supply certified reference materials. Our **customers can count on this competence** and refer to it. We know: Buying certified reference standards is a matter of trust.

#### **Our *TraceCERT®* and *Certipur®* ICP and AAS single- and multi-element certified reference material standard solutions are analyzed by our ISO / IEC 17025 accredited laboratories in Buchs & Germany**

Laboratories that either work in regulated environments, or are ISO/IEC 17025 accredited, are better prepared for audits. ISO/IEC 17025 is a recognized international accreditation for laboratories and is accepted worldwide through the International Laboratory Accreditation Organization (ILAC), and every country has its own accreditation bodies that are members of the ILAC. Our *TraceCERT®* and *Certipur®* ICP and AAS single- and multi-element certified reference material standard solutions are produced from the highest purity starting material, fulfilling both ISO/IEC 17025 and ISO 17034 international standards.

## Accreditation

The Deutsche Akkreditierungsstelle attests with this Accreditation Certificate that the calibration laboratory

**Merck KGaA**  
Kalibrierlaboratorium für chemische Messgrößen  
Frankfurter Straße 250, 64293 Darmstadt

meets the minimum requirements according to DIN EN ISO/IEC 17025:2018 for the conformity assessment listed in the annex to this certificate. This includes additional existing legal and normative requirements, including those in relevant sectoral schemes.

The management system requirements of DIN EN ISO/IEC 17025 are written in the language relevant to the operations of calibration laboratories and confirm generally with the principles of DIN EN ISO 9001.

This accreditation was issued in accordance with Art. 5 Para. 1 Sentence 2 of Regulation (EC) 765/2008, after an accreditation procedure was carried out in compliance with the minimum requirements of DIN EN ISO/IEC 17011 and on the basis of a review and decision of the appointed accreditation committees.

This accreditation certificate only applies in connection with the notices of 07.02.2023 with accreditation number D-K-15185-01.  
It consists of this cover sheet, the reverse side of the cover sheet and the following annex with a total of 4 pages.

Registration number of the accreditation certificate: **D-K-15185-01-00**

Berlin, 07.02.2023  
Translation issued:  
14.02.2023  
Dipl.-Wirtsch.-Ing. (BA) Tim Harnisch  
Head of Technical Unit

The certificate together with the annex reflects the status as indicated by the date of issue. The current status of any given scope of accreditation can be found in the directory of accredited bodies maintained by Deutsche Akkreditierungsstelle GmbH ([www.dakkis.de](http://www.dakkis.de)).  
This document is a translation. The definitive version is the original German accreditation certificate.

## Deutsche Akkreditierungsstelle

### Annex to the Accreditation Certificate D-K-15185-01-00 according to DIN EN ISO/IEC 17025:2018

Valid from: 07.02.2023  
Date of issue: 07.02.2023

Holder of accreditation certificate:

**Merck KGaA**  
Kalibrierlaboratorium für chemische Messgrößen  
Frankfurter Straße 250, 64293 Darmstadt

The calibration laboratory meets the minimal requirements of DIN EN ISO/IEC 17025:2018 and, if applicable, additional legal and normative requirements, including those in relevant sectoral schemes, in order to carry out the conformity assessment activities listed below.  
The management system requirements of DIN EN ISO/IEC 17025 are written in the language relevant to the operations of calibration laboratories and confirm generally with the principles of DIN EN ISO 9001.

Calibration in the fields:

#### Chemical and medical quantities

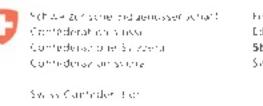

Chemical analysis and reference materials

- pH value
- Electrolytic conductivity
- Mass fraction of elements in standard solutions
- Mass concentration of elements in standard solutions
- Mass fraction of elements in multi standard solutions
- Mass concentration of elements in multi standard solutions
- Mass fraction of titrimetric standards
- Mass fraction of water in water standards and titrimetric standards
- Amount-of-substance concentration in volumetric solutions
- Mass fraction in ion chromatography standard solutions
- Mass concentration in ion chromatography standard solutions

This certificate annex is only valid together with the written accreditation certificate and reflects the status as indicated by the date of issue. The current status of any given scope of accreditation can be found in the directory of accredited bodies maintained by Deutsche Akkreditierungsstelle GmbH ([www.dakkis.de](http://www.dakkis.de)).

## Workflow Scheme for Inorganic Trace Analysis

# Sample Collection

We offer a wide variety of containers made in many sizes and materials to meet sample, temperature and chemical compatibility needs, for sampling as well as for storage.

Have a closer look at the possibilities on our webpage:

# Sample Preparation

## A. Digestion Reagents

Sensitive trace analysis applications require extremely pure sample preparation reagents with low impurities. Further, complete decomposition of the sample is required to achieve reproducible and accurate elemental results by instrumental analytical methods.

Sample wet digestion/dissolution is a method that breaks down the components of a matrix into simple chemical forms. This digestion can occur with the introduction of energy, such as heat; by using a chemical reagent, such as an acid; or by a combination of the two methods. Most analytical measurements using highly sensitive methods (AAS, ICP-AES, stripping voltammetry, ion chromatography, etc.) are performed on samples in solution. One of the most effective and economical sample preparation methods is microwave digestion. In most cases, achieving homogeneity and mineralization of the sample is sufficient.

UV photolysis using hydrogen peroxide and either potassium persulfate or nitric acid is very often the method of choice for the decomposition of organic impurities in aqueous solutions.

The most used reagents for wet decomposition are mineral and oxidizing acids. Wet decomposition has the advantage of being effective on both inorganic and organic materials. It often destroys or removes the sample matrix, thus helping to reduce or eliminate some types of interference.

We offer two lines of acids for different trace determination levels: Suprapur® and Ultrapur types in grade.

Suprapur® acids are filled in borosilicate or extra pure PE bottles. The material minimizes any elemental impurity of the acid, so the specification of the unopened bottle is maintained during the minimum shelf life. The bottles are cleaned and pre-conditioned before filling. Quality control is done after filling to ensure that the certified batch values are those of the filled acid. Suprapur® Hydrogen peroxide is packed in a black bottle to protect it against light. The bottles are closed with the SafetyCap, which has a PTFE membrane through which pressure is released without any risk of contamination.

## HNO<sub>3</sub>

Nitric acid is the most frequently utilized sample dissolution medium. It oxidizes metals not dissolved by HCl and other non-oxidizing acids. Au, Pt metals (expect Pd), Nb, Ta, and Zr are not dissolved. Al and Cr are passivated. Sn, Sb, and W give insoluble hydrous oxides. Dissolves most sulfides (except Hg<sup>2+</sup>). Unfortunately, the carbon contained in organic materials is only partly converted to CO<sub>2</sub> by HNO<sub>3</sub> at temperatures up to 200 °C. Nitric acid should never be used for the digestion of highly aromatic compounds because of the potential for the formation of highly explosive compounds. In the case of alcohols, the samples should be pretreated with sulfuric acid.

## HCl

Hydrochloric acid is used for many salts of weak acids, e.g. carbonates, phosphates, some oxides, and some sulfides.

## H<sub>2</sub>SO<sub>4</sub>

Sulfuric acid is used when its high boiling point (300 °C) is an advantage, as in expelling a volatile product or increasing the reaction rate. It provides dehydrating and oxidizing properties at high temperatures.

## HClO<sub>4</sub>

Perchloric acid is a very powerful oxidizing agent at fuming temperatures (boiling point 203 °C). It is usually mixed with NO<sub>2</sub> to oxidize easily attacked organic matter that might otherwise react violently with HClO<sub>4</sub>. H<sub>2</sub>SO<sub>4</sub> (dehydrating agent) increases oxidizing power. Good solvent for stainless steel and for sulfides.

## HF

Hydrofluoric acid is used for digestion of silicaceous samples and as an auxiliary reagent to HNO<sub>3</sub>, or HClO<sub>4</sub>, to eliminate fluoride. With HNO<sub>3</sub>, HF dissolves Ti, W, Nb, and Zr (and their carbides, nitrides, and borides) as a result of formation of complex fluorides. Certain refractory silicates and other minerals are not decomposed; these must be dissolved by fusion.

## H<sub>2</sub>O<sub>2</sub>

Hydrogen peroxide is a very popular oxidizing reagent as it is converted to water and oxygen during the oxidation of biological material. Additional advantages are that there is no acid corrosion of the digestion vessel PTFE walls, no formation of insoluble salts with an acid anion, and no change of the sample matrix by an acid. Because of its strong oxidation power, only small amounts of H<sub>2</sub>O<sub>2</sub> need be used so concentrated sample solutions can be obtained.

## AcOH

Acetic acid is most often used for the extraction of metallic impurities together with sodium acetate.

## HBr

Hydrobromic acid is a non-oxidizing acid. It is used in some special applications because it yields better reductive selectivity in the determination of Se(IV) by Hydride Generation-Laser Induced Fluorescence (HG-LIF) than HCl.

## H<sub>3</sub>PO<sub>4</sub>

Phosphoric acid is commonly used in the semiconductor industry to both clean and etch metal surfaces. The concentration of the phosphoric acid is critical to optimizing these processes.

## H<sub>2</sub>O

Water ensures the highest accuracy in trace analysis of ppt range by minimizing blank values.

**Table 1: High Purity Acids and Bases**

1.01513	Hydrofluoric acid 48%	Ultrapur
1.01516	Sulfuric acid 96%	Ultrapur

## B. Matrix Modifier

In graphite furnace AAS, element determinations are increasingly carried out with matrix modifiers. Chemical modification should be considered if an analyte is highly volatile, or if the analyte and the matrix volatilize at similar temperatures. Such modification would allow ashing at higher (or atomization at lower) furnace temperatures, resulting in elimination of the matrix with no loss of the analyte (or atomization of the analyte, but not the matrix). Depending on the element to be determined, various substances are used; however, palladium nitrate has become one of the most popular among them. A primary criterion for such substances is the absence of the element to be analyzed. For this reason, the recommended reagents indicated below have been specially tested for their suitability as matrix modifiers.

**Table 2: Matrix Modifiers**

1.07289	Palladium matrix modifier	for graphite furnace AAS c(Pd) = 10.0 ± 0.2 g/l (Pd(NO <sub>3</sub> ) <sub>2</sub> / HNO <sub>3</sub> ca. 15%)
1.05813	Magnesium matrix modifier	for graphite furnace AAS c(Mg) = 10.0 ± 0.2 g/l (Mg(NO <sub>3</sub> ) <sub>2</sub> * 6 H <sub>2</sub> O in HNO <sub>3</sub> ca. 17%)
1.07290	Phosphate modifier	for graphite furnace AAS NH <sub>4</sub> H <sub>2</sub> PO <sub>4</sub> 100 ± 2 g/l in H <sub>2</sub> O
76040	Palladium Matrix Modifier	for graphite furnace-AAS
63043	Magnesium matrix modifier	for graphite furnace-AAS

## C. Reducing Agents for Hydride AAS

Hydride AAS is used for the analysis (especially traces) of arsenic, antimony, tin, selenium, bismuth, and mercury. It is used to separate and preconcentrate analytes from sample matrices by a reaction that turns them into their hydride vapors. Sodium borohydride is the common reagent of choice for the reduction. Our reagents are specifically analyzed to ensure that they are free from hydride generating metals.

**Table 3: Reducing Agents for Hydride AAS**

1.06371	Sodium borohydride	for analysis
---------	--------------------	--------------

## D. Spectroscopic Buffers for Flame AAS

To avoid interferences in the flame-AAS in the determination of Na, Li and K, the sample and standard solution are modified with a spectroscopic buffer. Cesium chloride is the main substance added to the matrices.

**Table 4: Spectroscopic Buffers**

1.02037	Cesium chloride-aluminium nitrate buffer solution	acc. to Schuhknecht and Schinkel for the determination of sodium, potassium and lithium by flame spectrometry (enth./cont. 50 g/l CsCl + 250 g/l Al(NO <sub>3</sub> ) <sub>3</sub> * 9 H <sub>2</sub> O)
1.02039	Cesium chloride	99.995 Suprapur®
1.16755	Cesium chloride-lanthanum chloride buffersolution	acc. to Schinkel for atomic absorption spectroscopy 10 g/l CsCl + 100 g/l La

## Analysis

The quality of a CRM strongly depends on the quality of the starting materials, therefore, only materials of highest purity are used to produce *TraceCERT®* and *Certipur®* standards.

*TraceCERT®* and *Certipur®* certified reference materials (CRMs) are produced under ISO 17034 and analyzed in our ISO/IEC 17025 accredited labs. Our certificate of analysis includes the certification report and is issued according to the ISO Guide 31 guidelines.

**Table 5: Overview of AAS & ICP Single Solutions Portfolio**

	AAS Single Solutions		ICP Single Solutions	
	TraceCert®	Certipur®	TraceCert®	Certipur®
Certification			ISO 17034	
Metal Concentrations (mg/L)	1,000	1,000	10,000, 1,000, 10 & 1	10,000, 1,000 & 10
Matrix			Aqueous + Different Acid Concentrations	
Packaging	HD-PE Bottle	HD-PE Bottle	HD-PE Bottle sealed in an Aluminum foil bag	HD-PE Bottle
Package Size	250 mL <sup>1,2</sup>	100 mL, 500 mL	100 mL <sup>1,3</sup>	
Indicative Values	Up to 70 impurities are tested whose concentrations are stated in the certificate			

<sup>1</sup>Hg (*TraceCERT®*) bottled in 100 mL borosilicate white glass bottle

<sup>2</sup>The following AAS (*TraceCERT®*) standards come in a 100 mL package size: Pd, Au, Pt, Sc, Ti  
The following AAS (*Certipur®*) standards come only in a 100 mL package size: Cs, In, Te, Zr

<sup>3</sup>All 1 mg/L ICP solutions as well as some special mixtures come in FEP bottles

**Table 6: Overview of Multi-element Mixes Portfolio**

	Multi-element Standard Solutions	
	TraceCert®	Certipur®
Certification	ISO 17034	
Matrix	Aqueous + various acid concentrations	
Packaging	HD-PE Bottle sealed in an Aluminum foil bag	HD-PE bottle
Package Size	100 mL	100 mL, 500 mL

## 1. AAS and ICP Single Element Standards (*TraceCERT®* and *Certipur®*)

We offer a large range of single element certified reference standard solutions in various concentrations (1 mg/L, 10 mg/L, 1,000 mg/L, 10,000 mg/L) suitable for AAS, ICP-OES or ICP-MS application.

For our *TraceCERT®* line the certified values are given as m/m and m/V values. On the certificates more information is given about the certification process, stability and homogeneity assessments, uncertainty evaluation and for the ICP product range the measured trace impurities.

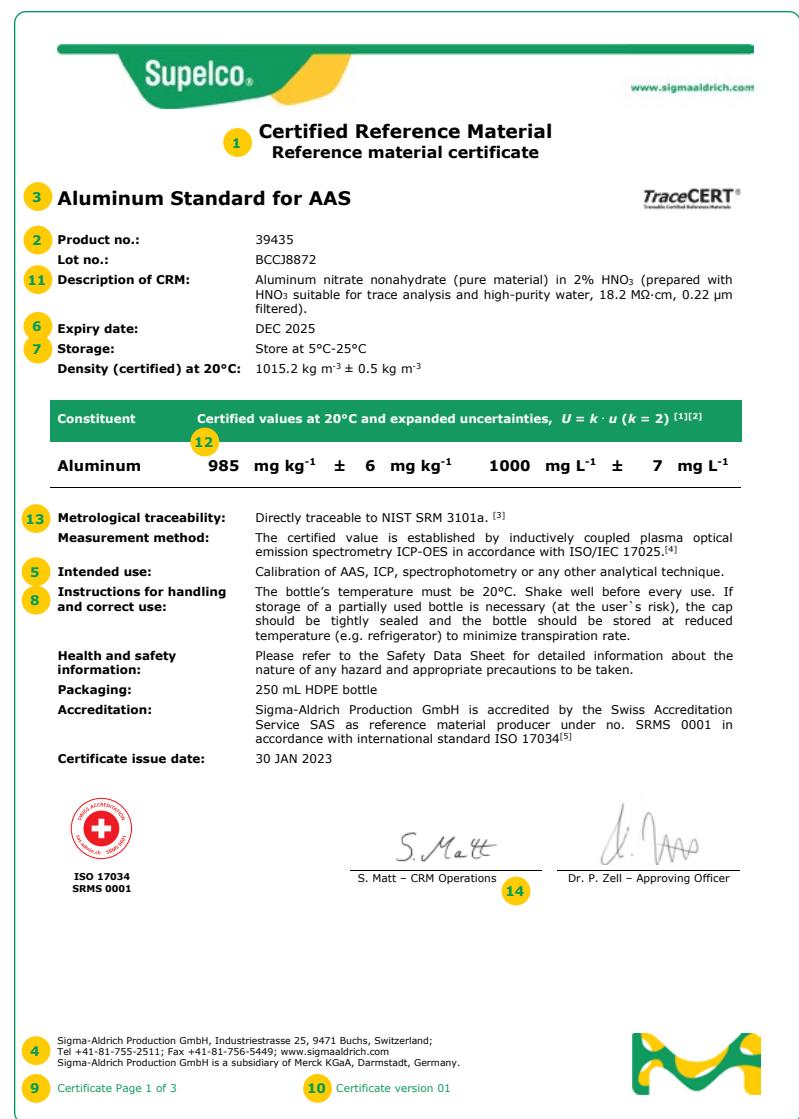

### Key Features of Single element Standard Solutions:

- Produced in accordance with ISO 17034 and characterized in an ISO/IEC 17025 accredited laboratory.
- Traceable to SI unit via primary reference materials (NIST, BAM)
- Comprehensive documentation according to ISO Guide 31, including proper uncertainty calculation
- Offered as *TraceCERT®* and *Certipur®* ICP and AAS single-element certified reference material standard solutions accredited by Swiss Accreditation Service (SAS) & Deutsche Akkreditierungsstelle (DAkkS), respectively.

### The certificate of a Certified Reference Material Grade *TraceCERT®* AAS single-element Standard:

Our certificates for Certified Reference Materials meet all requirements as recommended by ISO Guide 31:

Figure 4. ICP Single Element Standard, 10,000 mg/L

## 2. Titrisol® Concentrated Single-Element Standards for AAS

We offer an extensive range of Titrisol® concentrated single-element standards. Simply dilute the concentrate to produce the desired standard solution. Titrisol® concentrates are traceable to standard reference material from NIST and are provided in easy-to-handle plastic ampoules. Unopened Titrisol® ampoules have a minimum expiration time of 5 years. A comprehensive batch-specific Certificate of Analysis can be downloaded from our webpage, using the product and lot number.

### Dilution of Titrisol® Concentrates

In preparing a dilution series, the concentrates should be diluted with the same concentration of acid as is in the standard itself. Titrisol® concentrates should be diluted to 1L with 0.1 mol/l HCl in the first step. Alternatively, 30ml of 30% HCl can be placed in a volumetric flask and made up to 1L with distilled water. Further dilutions should then be made with distilled water.

#### Minimum expiration time

Unopened Titrisol® ampoules	5 years
Solution of 1'000 mg/l	Recommended max. 12 months
Solution of 10-100 mg/l	Recommended 1 month
Solution of 1-10 mg/l	Recommended max 1 week
Solution of <1 mg/l	Recommended 1 day

As exceptions, the following Titrisol® concentrates should be diluted as indicated:

As exceptions, the following Titrisol® concentrates should be diluted as indicated:	
Gold	Place 500 mL 30% hydrochloric acid in a volumetric flask and make up to 1 L with distilled water.
Lead, Selenium, Silver	Dilute to 1 L with 0.1 mol/L or place 5 mL 65% nitric acid in a volumetric flask and make up to the mark.
Molybdenum	Place 10 mL 25% ammonia solution in a volumetric flask and make up to 1 L with distilled water.
Silicon	Make up to the mark with distilled water
Vanadium	Place 5 mL 95% sulfuric acid in a volumetric flask and make up to 1 L with distilled water.
Zinc	ZnCl <sub>2</sub> in 0.06% HCl

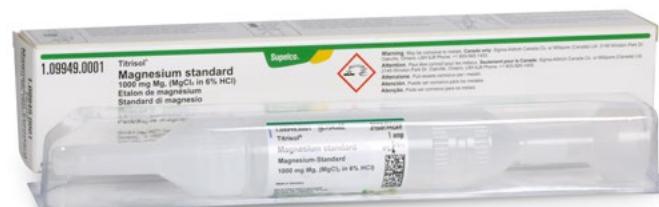

Figure 5. Titrisol® Concentrates

Table 11: Product range for Titrisol® Concentrates

Element	Composition [1000mg of element per ampoule]	Titrisol® concentrate Cat No
Aluminum	AlCl <sub>3</sub> in H <sub>2</sub> O	1.09967
Arsenic	As <sub>2</sub> O <sub>5</sub> in H <sub>2</sub> O	1.09939
Barium	BaCl <sub>2</sub> in 7% HCl	1.09968
Cadmium	CdCl <sub>2</sub> in H <sub>2</sub> O	1.09960
Calcium	CaCl <sub>2</sub> in 6.5% HCl	1.09943
Chloride	HCl in H <sub>2</sub> O	1.09871
Chromium	CrCl <sub>3</sub> in 4.2% HCl	1.09948
Cobalt	CoCl <sub>2</sub> in H <sub>2</sub> O	1.09986
Copper	CuCl <sub>2</sub> in H <sub>2</sub> O	1.09987
Fluoride	KF in H <sub>2</sub> O	1.09869
Gold	H(AuCl <sub>4</sub> ) in 12.72% HCl	1.09868
Iron	FeCl <sub>3</sub> in 15% HCl	1.09972
Lead	Pb(NO <sub>3</sub> ) <sub>2</sub> in H <sub>2</sub> O	1.09969
Lithium	LiCl in H <sub>2</sub> O	1.09934
Magnesium	MgCl <sub>2</sub> in 6 % HCl	1.09949
Manganese	MnCl <sub>2</sub> in H <sub>2</sub> O or	1.09988
Molybdenum	(NH <sub>4</sub> ) <sub>6</sub> Mo <sub>7</sub> O <sub>24</sub> in 0.7 % NH <sub>4</sub> OH	1.09926
Nickel	NiCl <sub>2</sub> in H <sub>2</sub> O	1.09989
Phosphate	H <sub>3</sub> PO <sub>4</sub> in H <sub>2</sub> O	1.09870
Potassium	KCl in H <sub>2</sub> O	1.09924
Selenium	SeO <sub>2</sub> in HNO <sub>3</sub>	1.09915
Silicon	SiCl <sub>4</sub> in 14% NaOH	1.09947
Silver	AgNO <sub>3</sub> in 5% HNO <sub>3</sub>	1.09906
Sodium	NaCl in H <sub>2</sub> O	1.09927
Sulfate	H <sub>2</sub> SO <sub>4</sub> in H <sub>2</sub> O	1.09872
Titanium	(NH <sub>4</sub> ) <sub>2</sub> TiF <sub>6</sub> in H <sub>2</sub> O	1.09829
Vanadium	VOSO <sub>4</sub> in 8.6% H <sub>2</sub> SO <sub>4</sub>	1.09994
Zinc	ZnCl <sub>2</sub> in 0.06% HCl	1.09953

## 3. Multielement Standards for ICP: TraceCERT® and Certipur® solutions

### TraceCERT® Multielement Solutions

Our **TraceCERT®** multielement solutions are certified reference materials (CRMs), produced and certified under ISO/IEC 17025 and ISO 17034. All CRMs are traceable to primary material from a National Metrology Institute (NMI).

All our multielement standard solutions are delivered in 100 mL HDPE bottles (except for the USP mixes which are delivered in FEP (Fluorinated Ethylene Propylene) bottles) & sealed in aluminum bag.

Figure 6. Periodic Table Mix

### A. Periodic Table Mixes

With these multielement standard solutions, all ICP measurable elements of the periodic table are covered (excluding Mercury). All components are present at a concentrations of 10 mg/L.

1	H																										He
2	Li	Be																									
3	Na	Mg																									
4	K	Ca	Sc	Ti	V	Cr	Mn	Fe	Co	Ni	Cu	Zn	Ga	Ge	As	Se	Cl	Ar

All elements in blue: Cat. No. 67349

All elements in yellow: Cat. No. 55263

All elements in purple: Cat. No. 04330

All elements in light blue: Cat. No. 96442

All elements in light pink: Cat. No. 93468

**Table 13: Chemical Group Mixes**

Cat No	Description	No. of Elements	Elements	Concentration	Matrix	Pck
67349	Rare earth element mix for ICP	16	Sc, Y, La, Ce, Pr, Nd, Sm, Eu, Gd, Tb, Dy, Ho, Er, Tm, Yb and Lu	50 mg/L each	2% HNO <sub>3</sub>	100 mL
55263	Metalloid and non-metal mix for ICP	10	B, Si, P, S, Ge, As, Se, Sn, Sb and Te	100 mg/L each	10% HNO <sub>3</sub> and 0.02% HF	100 mL
04330	Transition metal mix 1 for ICP	10	V, Cr, Mn, Fe, Co, Ni, Cu, Zn, Ag and Cd	100 mg/L each	2% HNO <sub>3</sub>	100 mL
96442	Transition metal mix 2 for ICP	8	Ti, Zr, Hf, Nb, Ta, Mo, W and Re	100 mg/L each	2% HNO <sub>3</sub> and 1% HF	100 mL
93468	Transition metal mix 3 for ICP	7	Ru, Rh, Pd, Os, Ir, Pt and Au	100 mg/L each	10% HCl	100 mL

Figure 7. TraceCERT® Multielement solutions

#### D. ICP Calibration Multielement Solutions: Certipur® Portfolio

Our Certipur® multielement calibration solutions are traceable to standard reference material from NIST. A certificate of analysis is enclosed in each package. It includes data on content, composition, traceability, date of release and expiry date.

#### 4. TraceCERT® mixes for special applications

##### A. Mixes acc. to ICH Q3D Guidelines (Pharma Testing)

We offer different inorganic elemental impurity mixes as certified reference material standard mixes with element ratios corresponding to the oral, parenteral and inhalation, and cutaneous/transcutaneous elemental concentrations limits of the ICH Q3D guideline.

You can find more information about this specific product group on our webpage:

## B. Mixes for Cannabis Testing

It is critical to accurately monitor levels of elemental impurities in cannabis products, both to ensure regulatory compliance – and more importantly – consumer and patient safety. Trace levels of heavy metals such as arsenic, cadmium, mercury and lead may accumulate in plant materials through uptake from soil and, more commonly, may be introduced through the use of certain fertilizers.

All **TraceCERT®** mixes are certified reference materials and are produced in accordance with ISO 17034. They are characterized in accordance with ISO/IEC 17025 specifications.

You can find more information about this specific product group on our webpage: [Cannabis Standards](#)

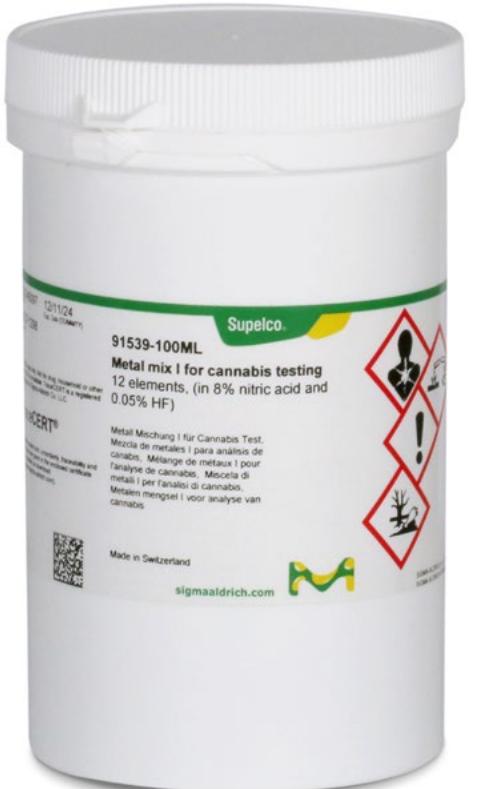

Figure 10. Mixes for Cannabis Testing

**Table 17: Mixes for cannabis testing**

Cat No	Product	Specifications	Pack size
89471	Heavy metal mix IX	In 12% nitric acid; As, Cd, Pb, Hg: each 100 mg/L	100 mL
18208	Heavy metal mix according to USP 561 articles of botanical origin	In 12% nitric acid; As: 20 mg/L Cd: 5 mg/L Hg: 10 mg/L Pb: 50 mg/L	100 mL
91539	Metal mix I for cannabis testing	In 8% nitric acid and 0.05% HF As, Hg, Cd, Pb, Cr, Ba, Ag, Se, Sb, Cu, Ni, Zn: each 100mg/L	100 mL

# Quality Assurance

## Matrix CRMs Spiked with Metals

Organic and inorganic compound matrix certified reference materials (CRMs) are extremely valuable for validating analytical methods and calibration of mass-transfer processes. However, their usage extends beyond simply calibrating mass-transfer processes. CRMs can also serve as quality control tools to ensure the ongoing performance and accuracy of test methods while validating the accompanying test results. They can further set a benchmark for comparison between different laboratories, adding a layer of reliability across the entire analytical process.

We offer a comprehensive selection of CRMs spiked with various metals for clinical, food, and soil matrices. These matrices include both non-fortified “real-world” samples and natural matrices in which certain analytes have been fortified to match and fulfill the analytical profiles required by analysts. Most of our CRMs are method-specific and are accompanied by certificates displaying essential information such as:

- Measured value plus uncertainty
- Expanded uncertainty confidence level
- Prediction value, in addition to the mean value and standard deviation from the mean

**Table 18: Matrix CRMs spiked with metals**

Cat No	Product	Matrix	Analytes
CRM041	Chromium VI - Soil	Environment	Cr VI

NIST1570A	Trace elements in spinach leaves	Food and Feed	Al, As, B, Cd, Ca, Co, cu, Eu, Pb, Mg, Mn, Hg, Ni, K, Rb, Sc, Se, Na, Sr, S, Th, U, V, Zn
ERMBB185	Bovine Liver (trace elements)	Food and Feed	As, Cd, Cu, Pb, Mn, Se, Zn
ERMBB186	Pig kidney (trace elements)	Food and Feed	Cd, Cu, Mn, Pb, Se, Zn, As, Hg, Ca, Chloride, K, Mg, Co, Na
ERMBB422	Fish muscle (trace elements)	Food and Feed	As, Cd, Cu, Fe, Hg, Iodide, Mn, Se, Zn
BCR668	Mussel tissue (trace elements)	Food and Feed	Cd, Dy, Er, Eu, Gd, La, Lu, Nd, Pr, Sm, Tb, Tm, Y
ERMBD150	Skimmed milk powder (major and trace elements)	Food and Feed	Cd, Ca, Chloride, Cu, Iodide, Fe, Pb, Mg, Mn, Hg, K, Se, Na, Zn
BCR402	White clover (trace elements)	Environment	As, Co, Mo, Se
ERMBD151	Skimmed milk powder (major and trace elements)	Food and Feed	Ca, Cd, Chloride, Cu, Iodide, Fe, Pb, Mg, Mn, Hg, K, Se, Na, Zn
BCR679	White cabbage (trace elements)	Food and Feed	Sb, As, Ba, B, cd, Ca, Cr, Cu, fe, Mg, Mn, Hg, Mo, Ni, Sr, Ti, Zn
ERMBD512	Dark chocolate (Cd, Mn, Cu, Ni)	Food and Feed	Cd, Cu, Mn, Ni
ERMCA615	Ground water (trace elements)	Environment	As, Cd, Fe, Hg, Mn, Ni, Pb

Cat No	Product	Matrix	Analytes
NIST1643F	Trace Elements in Water	Environment	Al, Sb, Ba, Be, Bi, B, Ce, Ca, Cr, Co, cu, fe, Pb, Li, Mg, Mn, Mo, Ni, K, Rb, se, ag, Na, Sr, Te, Tl, V, Zn
NIST606	Trace Elements in Basalt Glass	Environment	Ba, Co, Cr, Cu, La, Pb, Sc, Sr, V, Y, Zn
NIST1634C	Trace elements in fuel oil	Environment	Co, Ni, V
NIST2584	Trace elements in indoor dust	Environment	As, Cd, Cr, Pb, Hg
NIST2583	Trace elements in indoor dust	Environment	As, Cd, Cr, Pb, Hg
NIST1575A	Trace elements in pine needles	Environment	P, K, Ca
NIST695	Trace elements in multi-nutrient fertilizer	Fertilizer	As, Cd, Cr, Co, Cu
NIST1633C	Trace elements in coal fly ash	Environment	Al, As, Ba, Cd, Ca, Cu, Fe, Hg, K, Mg, Mn, Na, Ni, Pb, Rb, Sb, Sr, Ti, V
NIST1635A	Trace elements in coal (sub-bituminous)	Environment	Sb, As, Cr, Co, cu, Pb, Mn, Hg, Ni, Rb, Se, Th, U, V
NIST2586	Trace elements in soil containing lead from paint	Environment	As, Cd, Cr, Pb
NIST2587	Trace elements in soil containing lead from paint	Environment	As, Cd, Cr, Pb
NIST1566b	Oyster Tissue	Food and Feed	Ca, Chlorine, Mg, K, Na, S, Al, As, Cd, Co, Cu, Fe, Pb, Mn, Hg (total), methylmercury (as Hg), Ni, Rb, Se, Ag, Th, V, Zn
NIST955D	Toxic Metals and Metabolites in Frozen Human Blood	Human Fluid	Pb, As, Cd, Cr, Co, Mn, Hg (total), Se, U, Ethylmercury (as Hg), inorganic Mercury (as Hg), Methylmercury (as Hg)
ERMCA713	Waste water (trace elements)	Environment	As, Cd, Cr, Cu, Fe, Hg, Mn, Ni, Pb, Se
ERMCC141	Loam soil (trace elements)	Environment	Ce, Dy, Gd, La, Nd, Sc, Sm, Tb, Tm, Yb, Th, U
BCR142R	Light and sandy soil (trace elements)	Environment	Cd, Co, Cu, Pb, Mn, Hg, Ni
BCR483	Sewage sludge amended soil (trace elements)	Environment	Cd, Cr, Cu, Ni, Pb, Zn (EDTA-extractable); Cd, Cr, Cu, Ni, Pb Zn (acetic acid-extractable)
BCR484	Sewage sludge amended (terra rossa) soil (trace elements)	Environment	Cd, Cr, Cu, Ni, Pb, Zn (EDTA-extractable); Cd, Cr, Cu, Ni, Pb Zn (acetic acid-extractable)
BCR700	Organic-rich soil following harmonised EDTA and acetic acid extraction (extractable trace elements)	Environment	Cd, Cr, Cu, Ni, Pb, Zn (EDTA-extractable); Cd, Cr, Cu, Ni, Pb Zn (acetic acid-extractable)
ERMCC690	Calcareous soil (trace elements)	Environment	Ce, Dy, Gd, La, Nd, Sc, Sm, Tb, Tm, Yb, Th, U
ERMCD200	Bladderwrack, Fucus vesiculosus (trace metals), ERM	Food and Feed	As, Cd, Cu, Hg, Pb, Se, Zn
BCR505	Estuarine water (trace elements)	Environment	Cd, Cu, Ni, Zn
BCR579	Coastal seawater	Environment	Hg
BCR129	Hay powder	Food and Feed	Ca, Iodide, K, Kjeldahl-N, Mg, N, P, S, Zn
BCR176R	Fly ash (trace elements)	Environment	As, Cd, Co, Cr, Cu, Fe, Ni, Pb, Sb, Se, Tl, Zn
BCR185R	Bovine Liver (trace elements)	Meat	As, Cd, Cu, Mn, Pb, Se, Zn
BCR191	Brown bread (trace elements)	Food and Feed	Cd, Pb, Cu, Zn, Fe, Mn
BCR274	Single cell protein (trace elements)	Protein	As, Cd, Co, Cu, Mn, Pb, Se, Zn
BCR277R	Estuarine sediment (trace elements)	Environment	As, Cd, Co, Cr, Cu, Hg, Ni, Zn
BCR280R	Lake sediment (trace elements)	Environment	As, Cd, Co, Cr, Cu, Hg, Ni, Zn
BCR304	Human serum (Ca, Mg, Li)	Human Fluid	Ca, Mg, Li
BCR414	Plankton (trace elements)	Environment	As, Cd, Cr, Cu, Hg, Mn, Ni, Pb, Se, V, Zn
BCR596	Aquatic Plant (Cr)	Environment	Cr
BCR634	Human Blood (Pb, Cd)	Human Fluid	Pb, Cd
BCR635	Human Blood (Pb, Cd)	Human Fluid	Pb, Cd
BCR635	Human Blood (Pb, Cd)	Human Fluid	Pb, Cd
BCR637	Human Serum (Al, Se, Zn)	Human Fluid	Al, Se, Zn
BCR638	Human Serum (Al, Se, Zn)	Human Fluid	Al, Se, Zn
BCR639	Human Serum (Al, Se, Zn)	Human Fluid	Al, Se, Zn

Cat No	Product	Matrix	Analytes
BCR664	Glass (trace elements)	Environment	As, Ba, Cd, Chloride, Co, Cr, Pb, Sb, Se
BCR668	Mussel tissue (rare elements)	Food and Feed	Ce, Dy, Er, Eu, Gd, La, Lu, Nd, Pr, Sm, Tb, Tm, Y, Th, U
BCR723	Road dust (Pd, Pt, Rh)	Environment	Pt, Rh, Pd
ERMCE101	Trout Muscle (trace elements)	Food and Feed	As, Fe, Mn, Hg, Se, Zn
ERMCC144	Sewaged sludge (trace elements)	Environment	As, Cd, Co, Cr, Cu, Fe, Hg, Mn, Ni, Pb, Zn
ERMCD281	Rye Grass (trace elements)	Environment	Sb, As, B, Cd, Ca, Cr, Cu, Fe, Pb, Mg, Mn, Hg, Mo, Ni, K, Se, Si, Na, S, Sn, Zn
ERMCE196	Bovine blood (Pb, Cd)	Food and Feed	Pb, Cd
ERMCE278K	Mussel tissue (elements)	Food and Feed	As, Cd, Cr, Cu, fe, Hg, Mn, Ni, Pb, Rb, Se, Sr, Zn
ERMDB001	Human hair (trace elements)	Hair	As, Cd, Cu, Hg, Pb, Se, Zn
