

**MILLIPORE  
SIGMA**

# Undisputed Accuracy for Your Quantitative Results

Diluted ready-to-use and Certified Reference Materials for water and wastewater analysis

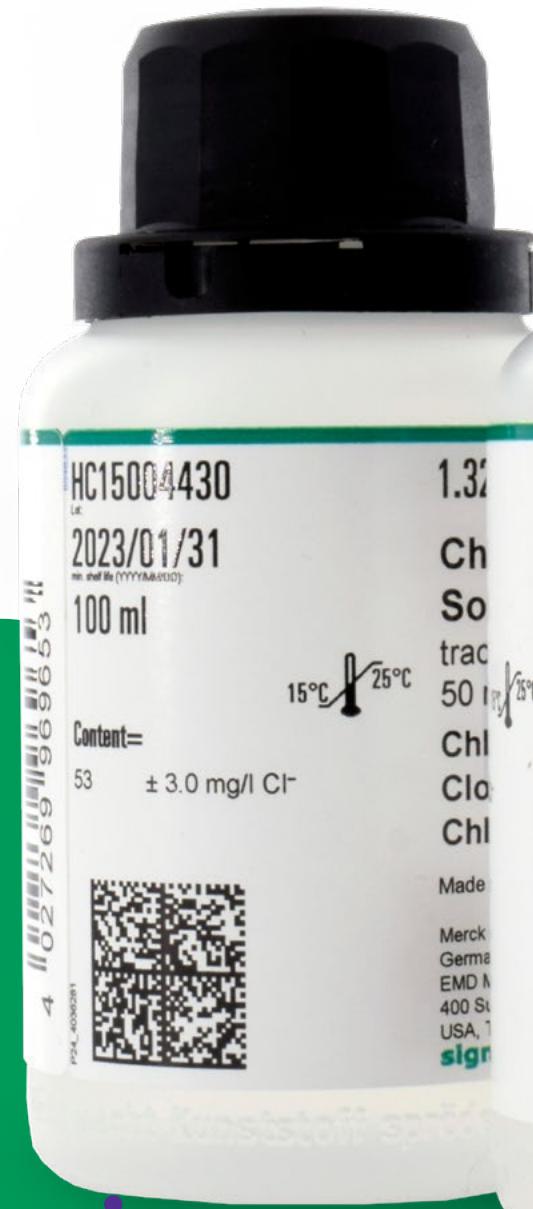

MilliporeSigma is the U.S. and Canada Life Science business of Merck KGaA, Darmstadt, Germany.

**Supelco®**  
Analytical Products

# Diluted Reference Materials ready-to-use

Experience absolute precision with our ready-to-use diluted reference materials (RMs). Thanks to their exact concentrations, expanded measurement uncertainty, and direct traceability to NIST primary reference materials, our standard solutions ensure that your results are correct and comparable worldwide.

- Precise Analytical Quality Control
- Directly Traceable to NIST
- No Dilution Needed

Exact, batch-specific  
concentration and expanded  
measurement uncertainty

The perfect combination for water analysis: use our standard solutions with Spectroquant® Prove spectrophotometers.

Complete range with all parameters for analytical quality control of wastewater, drinking water and process water

Detailed Certificate of Analysis for each RM simplifies accreditation

Compatible with Spectroquant® test kits or those from other suppliers

Ready-to-use, diluted RMs save time and prevent dilution errors

Long shelf life of 24 months

Directly traceable to NIST or USP primary measurement standards

Ideal for validating international norm methods: ISO, EN, APHA and EPA

1.32230.0100

# Guideline for Calculating your Working Tolerance

According to ISO 17025, every lab needs to calculate its working tolerance. Here are some hints for this procedure.

To help determine the individual measurement-uncertainty estimation, every laboratory that works according to the ISO 17025 standard should prepare a control chart for each reference material and for every lab operator. When it comes to defining the lab's working tolerance, the recommended procedure is to:

- Calculate the standard deviation of the measurements of the standard
- Define the lab's own error tolerances that are to be strived for

Here the user should consider the confidence interval that is usually used. Two-fold standard deviation yields a 95% confidence interval, and three-fold standard deviation a 99% confidence interval. The defined confidence interval should be marked on the control chart as the upper and lower limit.

The standard should be measured regularly, if not on a day-to-day basis. The instructions can be taken from the corresponding standards or the internal specifications. Wherever applicable, in the case that the method covers a larger measuring range, two or more standards in the

range of the normal results should also be determined.

In the Spectroquant® test kits, we state the accuracy of the respective method on the Certificate of Quality. This can be used to facilitate the estimation of the working tolerance. The working tolerance naturally also depends on the optical path length of the cells that are used.

The accuracy is calculated on the basis of the mean value of the 95% confidence interval of the respective test; this has been calculated over many years of experience along with the specified blank error. The blank error is stated in the batch certificate of each batch of the respective test kit for the reference cell.

These reference materials can be used to check all photometric methods (both standards and test kits). The reference materials can however, also be used for non-photometric methods. In this case, the user must perform their own measurement-uncertainty estimation. Guidelines or working tolerances of the type that we offer for our test kits are not available for other methods. The same applies for test kits supplied by other manufacturers.

# Important definitions for Reference Materials

## Traceability

"Property of a measurement result whereby the result can be related to a reference through a documented unbroken chain of calibrations, each contributing to the measurement uncertainty." ISO Guide 99:2007; *International Vocabulary of Metrology – Basic and General Concepts and Associated Terms (VIM)*

## Reference Material (RM)

"Reference Material (RM) characterized by a metrologically valid procedure for one or more specified properties, accompanied by an RM certificate that provides the value of the specified property, its associated uncertainty, and a statement of metrological traceability." ISO/Guide 30:2015; *Reference Materials – Selected Terms and Definitions*

## Primary measurement standard

"Measurement standard that is designated or widely acknowledged as having the highest metrological qualities and whose property value is accepted without reference to other standards of the same property or quantity, within a specified context." ISO/Guide 30:2015; *Reference Materials – Selected Terms and Definitions*

## Secondary measurement standard

"Measurement standard whose property value is assigned by comparison with a primary measurement standard of the same property or quantity." ISO/Guide 30:2015; *Reference Materials – Selected Terms and Definitions*

## Measurement uncertainty

Non-negative parameter characterizing the dispersion of the quantity values being attributed to a measurand, based on the information used. ISO Guide 99:2007; *International Vocabulary of Metrology - Basic and General Concepts and Associated Terms (VIM)*

## Expanded measurement uncertainty

Product of a combined standard measurement uncertainty and a factor larger than the number one NOTE: The term "factor" in this definition refers to a coverage factor. ISO Guide 99:2007; *International Vocabulary of Metrology - Basic and General Concepts and Associated Terms (VIM)*

# Photometric, ready-to-use, multi-parameter standards and spiking solutions - Spectroquant® CombiCheck

CombiCheck contains multi-parameter standard solutions for checking the overall system – from test kits and instruments to individual working procedures. Each pack contains one standard solution and one addition solution, both of which are directly traceable to NIST primary standards.

When the specified concentration of the standard solution is found, the entire analysis system is in order. If there are deviations from the stated value, use the addition solution to identify errors due to interfering substances in the sample matrix. In case the recovery rate is insufficient (beyond specified tolerances), analyze and eliminate the cause through appropriate countermeasures, such as sample pre-treatment.

# Certipur® and TraceCERT® Certified Reference Material Standard Solutions

If you need to make your own dilute solutions according to your lab-specific concentrations, rely on the superb quality of our Certipur® and TraceCERT® Certified Reference Material Standard Solutions.

## Ion chromatography standards

Certipur®	TraceCERT®
Anionic and cationic solutions	Anionic and cationic solutions
Concentrations: 1000 mg/L	
Unique level of accuracy and lot-specific value	
(ISO 17034 accreditation in preparation)	Produced according to ISO 17034
Traceable to SI-units via primary reference standards from NIST	
Sophisticated packaging* and comprehensive documentation including proper uncertainty calculation, expiry date and storage information	

\* All standards are supplied in HDPE bottles except for the TraceCERT® Mercury solution, which is bottled in 100 mL borosilicate white glass bottle

## ICP/AAS spectroscopy standards

Certipur®	TraceCERT®
Concentration: 1, 10, 1000, 10000 mg/L	
Unique level of accuracy and lot-specific value	
Produced according to ISO 17034	
Traceable to SI-units via primary reference standards from NIST or BAM	
Sophisticated packaging* and comprehensive documentation including proper uncertainty calculation, expiry date and storage information	

\*All standards are supplied in HDPE bottles except for the TraceCERT® Mercury solution, which is bottled in a 100-ml borosilicate white glass bottle.

Batch-specific certificates are available via  
**SigmaAldrich.com**

Zinc	HNO <sub>3</sub>	100 mL	<b>1.19806.0100</b>	100 mL	18562

1) analytical standard, not CRM

# Analytical Instrument Qualification of Photometric Equipment

UV/Vis Certified Reference Material (CRM)  
and Certipur® Reference Material Solutions (RM)

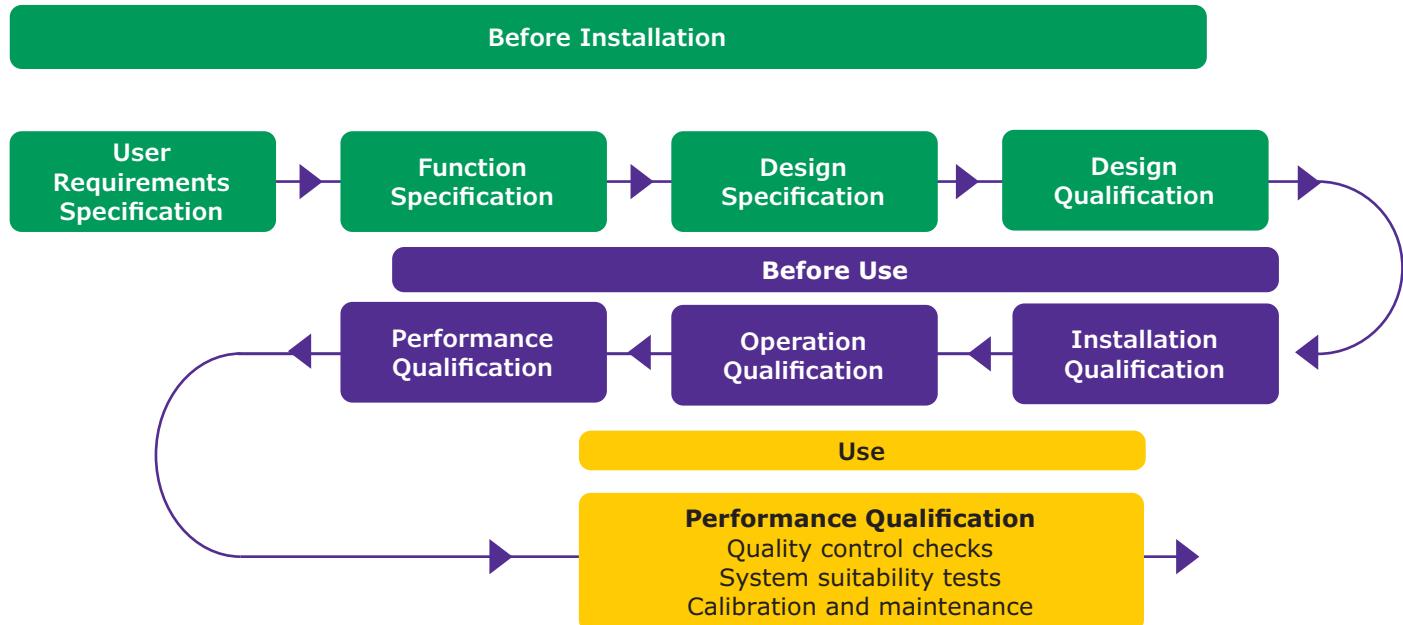

Using our UV/Vis solutions, the consistent and correct function of your UV/Vis spectrophotometer can be detected throughout the whole timeline of analytical Instrument Qualification (AIQ).

Our product program consists of double-certified solutions acc. to ISO 17025 and ISO/IEC 34 as well as Certipur® reference solution. The solutions are either manufactured acc. to Ph.Eur. or USP<857>.

See the following table for an overview about our UV/Vis solutions application possibilities and features

	Certified Reference Material Solutions	Certipur® Reference Solutions
<b>Features</b>		Manufactured acc. to Ph.Eur.
		Ready-to-use solutions
		Packaged in amber glass ampoules for increased stability
<b>Parameters detected</b>	<ul style="list-style-type: none"><li>Absorbance</li><li>Stray light</li><li>Spectral resolution</li><li>Wavelength accuracy</li></ul>	

## Qualification Processes

## Certipur® Reference Solutions

Product	Description	Order No
UV-VIS Standard 1 solution, according to Ph.Eur. (absorbance)	2x10 mL K <sub>2</sub> Cr <sub>2</sub> O <sub>7</sub> , 60.06 mg/L in H <sub>2</sub> SO <sub>4</sub> / 0.01N and 6x10 mL H <sub>2</sub> SO <sub>4</sub> / 0.01N	<b>1.08160.0001</b>
UV-VIS Standard 1a: Potassium dichromate solution (600mg/l), according to Ph.Eur. absorbance at 430 nm	2x10 mL K <sub>2</sub> Cr <sub>2</sub> O <sub>7</sub> , 606.6 mg/L in H <sub>2</sub> SO <sub>4</sub> / 0.01N and 6x10 mL H <sub>2</sub> SO <sub>4</sub> / 0.01N	<b>1.04660.0001</b>
UV-VIS Standard 2: Sodium nitrite solution according to Ph.Eur. stray light testing	3x10 mL NaNO <sub>2</sub> 50 g/L in H <sub>2</sub> O	<b>1.08161.0001</b>
UV-VIS Standard 3: Sodium iodide soution according to Ph.Eur. stray light testing	3x10 mL NaI 10 g/L in H <sub>2</sub> O	<b>1.08163.0001</b>
UV-VIS Standard 4: Potassium chloride solution according to Ph.Eur. stray light testing	3x10 mL KCl 12 g/L in H <sub>2</sub> O	<b>1.08164.0001</b>
UV-VIS Standard 5: Toluene solution in n-hexane according to Ph.Eur. resolution power testing	2x10 mL 0.02% (v/v) toluene in n-hexane and 6x10 mL n-hexane	<b>1.08165.0001</b>
UV-VIS Standard 6: Holmium oxide solution according to Ph.Eur. for wavelength accuracy	3x10 mL Ho <sub>2</sub> O <sub>3</sub> 40 g/L in HClO <sub>4</sub> (10% v/v)	<b>1.08166.0001</b>
