Spare Parts

To help you select and manage the spare parts required for your system, our experts have performed a risk assessment to determine which parts to keep in stock.

The risk assessment is based on our experience; each customer must perform their individual risk assessment for their process, to check the alignment with our strategy and review the stock requirements accordingly.

As a result of this risk assessment, we defined 3 categories of spare parts:

Type of parts	Description	Stock recommendation
Preventive maintenance parts	These are parts that are subject to wear and tear and that we recommend replacing on a regular basis. Under average usage conditions, these parts should be replaced at least once per year. A risk assessment based on the specific system usage and production conditions may result in a requirement to replace some or all of these parts more frequently. Not replacing wear and tear parts as recommended can impact system functionality and may result in system shutdown.	1 part per unit
Critical parts	These parts have been identified as most critical to avoiding system downtime and are recommended to be kept in stock for immediate availability.	1 part per unit
All other parts	All other individual parts.	Risk-based customer decision

Based on our risk analysis, preventive maintenance and critical spare parts are essential to keep your equipment running. We recommend keeping preventive maintenance and critical spare parts in stock.

Means that the part is illustrated.

The illustrations are examples. Actual configuration may vary according to selected options and custom features.

* **Preventive Maintenance (PM)** parts are subject to wear and tear. Under average usage conditions, they should be replaced at least once per year. A risk assessment based on the specific system usage and production conditions may indicate replacement of some or all of these parts more frequently.

** **Critical parts** have been identified as most critical to avoiding system downtime and are recommended to be kept in stock for immediate availability.

For bot PM and critical parts stock recommendation is 1 part per unit.

For custom or additional spare parts, please contact your local sales representative.

Replacement Part List

Spare parts list for maintenance replacement: replacement parts depend on system and customer's request. Refer to the operating instructions part of document MK_CA7934EN latest version for recommended spare parts.

Qty*: Record the exact number of replaced parts when it comes to a kit of several identical parts.
